Salinity Management Pipeline

SMP Phase 3 (536). Phase 3 consists of approximately 26,400 LF of 24-inch PVC or HDPE pipe. It proceeds from the intersection of Upland and Lewis Roads in Camarillo to Santa Rosa and Hill Canyon Rds. in the Santa Rosa Valley.

SMP Phase 4 (561). Extend the SMP to serve potential dischargers, including one or more groundwater desalters in west Simi Valley, potable reuse at Simi Valley's wastewater treatment plant, Las Virgenes Municipal Water District and Triunfo Sanitation District's potable reuse treatment facility, and one or more groundwater desalters in Thousand Oaks.

North Pleasant Valley Desalter (574). Discharge station to meter and sample the discharge of brine from the North Pleasant Valley (NPV) Desalter to the SMP.

Emergency Water Supply Reliability

LVMWD-CMWD Interconnection (450). This projects will provide a potable water interconnection between Calleguas and Las Virgenes MWD.

Wellfield Emergency Generators (494). This project consists of diesel generators to provide electricity for operation of the wellfield in the event of a power outage.

Grandsen Pump Station Phase 2 (500). Grandsen Pump Station (GPS) Phase 2 provides pumping capacity to serve Calleguas' upper zone (Simi Valley, Thousand Oaks, Oak Park), including two 30 cubic feet per second (cfs) vertical turbine pumps. The project also includes emergency backup power, replacement of the aging Pressure Regulating Station No. 2, and installation of a hydroelectric generator.

ASR Monitoring Wells (528). This project consists of both shallow and deep monitoring wells to fill in gaps in ASR groundwater monitoring network around the perimeter of both Wellfield Nos. 1 and 2 in order to measure the influence of aquifer storage and recovery operations on water levels in neighboring wells, document the movement of salinity in the aquifer, and facilitate overall basin management..

ASR Groundwater Model (527). This project constructs and calibrates a numerical model of the East and South Las Posas Sub-Basins to provide a planning tool for the ASR facility and predict basin wide effects on groundwater levels from future ASR operational scenarios relevant to emergency water supply planning and other potential uses.

Calleguas-Ventura Interconnection (562). Facilities (meter station, pressure regulating station/pump station, pipeline connections, and necessary electrical and communications systems) to interconnect Calleguas' and the City of Ventura's potable water systems enabling Calleguas to receive potable water from Ventura during an outage of imported supplies.

Simi Valley Reservoir (569). Construct a 6.5 million gallon concrete storage reservoir located in Eastern Simi Valley and connected to Calleguas' Conduit North and South Branch allowing Calleguas to meet demands in the Simi Valley Region during a short-term outage of imported water.

Crestview Well #8 (585). This project is a joint effort between Crestview Mutual Water and Calleguas to construct Well #8. This project is anticipated to be one of the most cost-effective projects to provide additional water supply in an outage.

Lake Bard Pumps (587). Installation of pumps to enable ~2,988 AF of Lake Bard water that cannot currently be treated by the LBWFP due to insufficient hydraulic head to be pumped through the treatment process.

Fairview ASR Well Rehabilitation (589). Perform well rehabilitation and system upgrades to enable the existing Fairview Well (which was originally an aquifer storage and recovery well but has not been operated since 1998) to supply groundwater to VCWWD1, which is largely dependent on imported water from Calleguas.

Improvements to Existing Facilites

Oxnard-Santa Rosa and Las Posas Feeder Improvements (442). This project consists of modifications to existing facilities to address surge in the Oxnard-Santa Rosa and Las Posas Feeders. It also includes replacement of aging electrical equipment at Santa Rosa Hydroelectric Generator.

Oxnard-Santa Rosa Feeder & Santa Rosa Hydro Improvements (582). Various rehabilitation, replacement, and upgrade improvements to address surge concerns, improve operability and reliability, and avoid failure of aging components.

East Portal Isolation Enhancements (601). Fabricate a new gate for isolation between MWD's West Valley Feeder No. 1 and the Santa Susana Tunnel that would enable water to be safely diverted from the tunnel entry via a new pipeline and connection to the exterior of the vault. Includes improvements to adjacent drainage facilities.

Crew Building Improvements and Networking Center Relocation (603). Modifications to and expansion of existing Crew Building to provide sufficient space for existing and future O&M staff. Also includes provision of an appropriately sized and equipped Emergency Operations Center, a relocated Networking Center near the Control Room, and replacement of roofs on LBWFP structures as needed.

Rehabilitation, Replacement & Relocation

Conejo Pump Station Rehabilitation (480). This project replaces pumps, motors, switchgear, and piping as necessary for reliable and efficient operations.

PLC Replacement Project (489). This project replaces outdated & unsupported PLC instrumentation equipment located at various locations throughout the Calleguas system with a reliable and supported technology.

TOD Pump Station Rehabilitation (590). This project replaces pump controls, check valves and electrical systems that are beyond their useful life improving reliability of this critical pump station.

Lake Sherwood Pump Station Rehabilitation (591). This project replaces a variable frequency drive and electrical systems that are beyond their useful life. This will include the construction of a surge tank and a fourth larger pump to improve the ability to fill Lake Sherwood Reservoir under high demand conditions.

Lindero Pump Station Rehabilitation (592). This project replaces pumps, piping and valves as well as architectural, structural and electrical improvements to improve reliability of the pump station during outages.

CCNB Broken Back Rehabilitation, Phase 4 (598). Rehabilitate and/or strengthen segments of Calleguas Conduit North Branch that are vulnerable to "broken back" failures. Phase 4 will rehabilitate 5 locations on CCNB located between the intersections of Madera Road and Country Club Drive and Cochran Street and First Street.

Unplanned System Repairs

Emergency Distribution System Repairs. Although the need for specific emergency repair projects cannot be identified, it is anticipated that emergency repairs will periodically be required. This serves as a placeholder for future projects which have not yet been identified.

Pump, Hydroelectric Generators & Well Repairs. Although the need for specific pump and well repair projects cannot be identified, it is anticipated that these repairs will periodically be required during the fiscal year. Due to the nature and cost of these repairs, these items will need to be capitalized per the District's fixed asset policy. This serves as a placeholder for future projects which have not yet been identified.

Calleguas Municipal Water District Reserve Analysis FY 22/23

	Operating Reserve Calc	Capital Reserve Calc	SMP Operating Reserve Calc
Invested in capital assets, Bond Funds	\$0	\$0	\$0
Unrestricted, Unreserved	40,801,799	141,860,326	(1,621,497)
