

# Calleguas MWD / Las Virgenes MWD Interconnection Project

The proposed project includes installation of a 30" diameter potable water supply pipeline primarily along Lindero Canyon Road from Thousand Oaks Boulevard to the intersection of Kanan Road and Falling Star Avenue. A new underground pump station and pressure reducing station is also proposed to be constructed under the project on public land adjacent to Lindero Canyon Road to facilitate the flow of water to and from Calleguas and Las Virgenes. In addition, the project will include installation of small diameter (4" to 6") pipeline related to Las Virgenes' recycled water system. The primary objective of the project is to provide greater water reliability for the Oak Park, North Ranch, Westlake Village, and Agoura Hills communities and surrounding areas through a system interconnection between the region's primary water suppliers.

## Community Meeting

**When:** Monday, December 3<sup>rd</sup> at 7:00 p.m.

**Where:** Oak Park Community Center, 1000 North Kanan Road,  
Oak Park, CA

A Notice of Preparation (NOP) of a Draft Environmental Impact Report (EIR) was recently released to solicit comments as to the scope and content of an EIR to be prepared in support of the proposed project. The EIR will address potentially significant environmental impacts of the project and specify mitigation measures designed to minimize any identified effects. An Initial Study including a project description, location, and probable environmental effects is available on-line at [www.calleguas.com/CMWD-LVProjNOP-IS.pdf](http://www.calleguas.com/CMWD-LVProjNOP-IS.pdf).

At the community meeting, agency staff will provide an overview of the project including project objectives, pipeline alignment alternatives, pump station siting considerations, and environmental issue areas to be addressed in the EIR. The meeting will be streamed on Facebook Live and will be available for later viewing on Calleguas' Facebook page.
